Drugs for Neglected Diseases initiative, Foundation for Innovative New Diagnostics, Innovative Vector Control Consortium, International Partnership for Microbicides, Medicines for Malaria Venture, PATH, TB Alliance

Product-development partnerships (PDPs) play a crucial role in developing transformative health tools; at the same time, investments in product development need to translate into accessible and affordable innovations. This event will discuss the status of current synergies between the Global Fund, PDPs and other innovators at global, national and local level for scaling up access and uptake of health technologies to accelerate the achievement of the SDG3 target to end HIV/AIDS, tuberculosis and malaria and ensure that nobody is left behind on the path to Universal Health Coverage. In particular, the event will present outcomes and next steps of a recent consultation which brought together the Global Fund, WHO, PDPs and other innovators to share experiences on the most critical public health challenges, identify concrete actions to address bottlenecks and accelerate impact through innovation.
