GFAN + GNP+ side event on situating HIV/AIDS

In this panel we will examine different issues related to situating our HIV/AIDS, tuberculosis and malaria and Global Fund advocacy within the UHC narrative. Different panelists will examine concepts related to "the last mile first" concept of UHC which includes building comprehensive, people-centred and community-led and based systems for health that put the needs of the poorest and most marginalized members of society at the start and centre of UHC responses and how this relates to key populations and vulnerable populations in ATM.
